eFog
REJUVENATING FOG SEAL
Ergon Asphalt & Emulsions, Inc.
ergonasphalt.com

"The material is fast breaking, allowing for the roadway to be opened to traffic in less than 45 minutes."

ERIC PITTS, PE.,
FORMER STATE MAINTENANCE ENGINEER

INFUSE NEW LIFE INTO OLDER ROADS.

eFog is an innovative, rejuvenating fog seal that can be used very early on in the road preservation cycle to extend the life of a road and delay the need for more in-depth service for two to three years.

MULTI-USE

Unlike the average fog seal, eFog contains rejuvenators and can be used as a bond coat or a cold pour crack filler depending on the needs of the project.

INCREASES DURABILITY

The polymer-modified asphalt base provides a more dense film thickness for increased durability and resistance to tracking.

ENHANCES SAFETY

In addition to its fast cure time, the application of eFog helps delineate driving lanes.

REDUCES COST

eFog lets you extend the life of OGFC pavements by as much as 33% with a single application.

By using eFog to quickly address signs of distress, you can fix minor cracks and return the road to traffic in as little as one hour after application.
