

Hartford Health Care Drive-Through Priority Testing for Symptomatic First Responders
December 2, 2020

Starting December 2, Hartford Health Care is offering priority testing for symptomatic first responders at its drive-through facilities across the state, with the exception of its Bradley Airport and Westport locations. This service will be offered during the first two hours that the location is open, and will continue as long as the facilities can handle the volume. HHC is actively working on moving its Drive-Through testing to appointment only in the next few weeks – as soon as HHC has a firm date on this change, they will communicate it immediately.

For purposes of this program, first responders are defined as active state or local police, career and volunteer fire and emergency medical service personnel, and; state or local public safety tele-communicators (i.e., dispatchers) (911/CMED call-takers.)

The first responder must present active credentials/ agency ID and an insurance card.

At this time, this priority testing is available for symptomatic first responders only, and is not offered to those who have experienced an exposure but are asymptomatic, nor is this available for family members.
