ASSEMBLY & DISTRIBUTION

Initiating a new cart program is easy with WISTAR®, the complete assembly and distribution, audit verification, and fleet management technology by SCHAEFER. By providing an easy to use platform backed by GPS coordinates of each cart delivery and service activity, WISTAR® puts customer service at your fingertips. The intuitive WISTAR dashboard provides custom and on-demand reporting.

Everything you need to start and complete a new or supplemental cart service program, provide municipal audits, and validate delivery is handled by WISTAR. Plus, WISTAR is a web based software program that is mobile friendly so everything can be done on the go.

THE PERFECT LIST

WISTAR documented processes are meticulous on the initial address list, applying upwards of 36 custom scripts in order to identify and resolve all inconsistencies before ever delivering the first cart. This approach has built a foundation yielding 99.997% accuracy over 3.6 million carts.

TRUE REAL-TIME VISIBILITY

WISTAR® provides transparency through the entire delivery process starting with order submission. Your customized dashboard allows access to all facets of delivery in real-time. From a desktop or mobile device, simply log into WISTAR to find inventory, zone planning, quantities, and exceptions. Support services are also easily viewed by checking work orders throughout the assembly and distribution process.

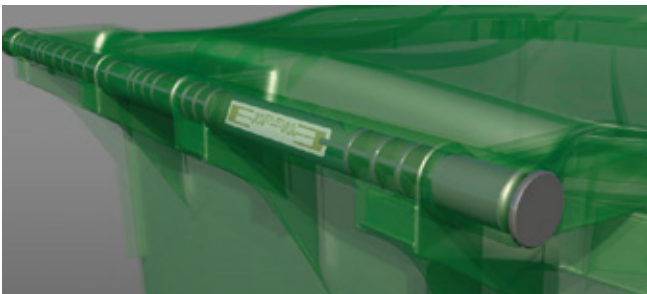

AUDIT ON-DEMAND

SCHAEFER utilizes the capabilities built into WISTAR that perform complete and comprehensive route audits during all municipal assembly and distribution projects. Audits typically uncover 10-20% of non-paying service customers—and gives the ability to capture lost revenue. SCHAEFER carts continue to provide detailed information through each collection cycle.

PROTECTED CART IDENTIFICATION

WISTAR RFID tags are packed with intelligence beyond any other in the industry. Each tag is encoded during the manufacturing process and includes cart size, serial number, stream, and manufacturing date with location to ensure accurate identification throughout the cart life cycle. Each RFID tag is hidden away and protected from the elements to prevent damage, loss, and theft.
