Re: Mixing liquid magnesium chloride with rock salt

Below is a brief summary of the method used to mix liquid magnesium chloride with rock salt:

“The Clearlane® Enhanced Deicer production process is initiated as untreated, sodium chloride rock salt is conveyed to a rotary blending screw. A liquid magnesium chloride blend, containing corrosion inhibitor, green dye, and performance enhancer is injected continuously, via a regulated pump and hose delivery system, into the screw. The liquid magnesium chloride blend and untreated rock salt combine to form a consistently blended, treated final product, Clearlane® Enhanced Deicer.”

Should you need any further info, please let me know.
